Broome's Gateway Pet Friendly Caravan Park

Roebuck Roadhouse

Willare Roadhouse

DAMPIER PENINSULA

Middle Lagoon is pet friendly.

Cygnnet Bay Pearl Farm - We welcome on leash pets for day visits in our picnic areas and to stay in our camp/van sites here at Cygnnet Bay. Dogs are **not permitted in our accommodation or at the pool restaurant level**. Please ask our staff for more direction to pet friendly areas. You will need to provide your own pet waste bags.

Banana Well Getaway Dog owners are to take full responsibility for their pets, and on leash at all times.

Willie Creek Pearl Farm

Visitors can take their dogs to Willie Creek Pearl Farm if self-driving, however they are not allowed on the tour, on the boat, on the decking and in the nursery due to bio-security issues. They are permitted on the grounds and there are plenty of shady trees. Please be aware and cautious of the resident crocodiles in Willie Creek and other native fauna including reptiles. If you have a guide dog, please call ahead of your tour.

GIBB RIVER ROAD & EAST KIMBERLEY

Mt Elizabeth Station - pet friendly in the bush campground (on leads). Pets will be considered at the Manager's discretion if request on booking enquiry. Not allowed in rooms. Dogs allowed to go to gorges on site.

Fitzroy River Lodge (campground only, restrained)

Honeymoon Bay (pet friendly)

Dumbarra Burru Caravan Park Derby

Home Valley (campground only - leash at all times)

Violet Valley Campground (on lead at all times)

Doon Doon Campground

Iminjti Campground

Mimbi Caves Campground (small/medium dogs). We have workers that are in the office that are happy to look after and care for the dog whilst they are on tour. Girlorloo Tours at Mimbi Caves > [Book tours here](#)

REGULATIONS

Shire of Broome

Please note that the Shire Ovals and Recreation Grounds are not dog exercise areas. If your dog is not in a specified exercise area it must be on a leash at all times.

<https://www.broome.wa.gov.au/Community/Ranger-Services/Animal-Control>

National Parks W.A.

Dogs are not permitted in national parks, but there are a few exceptions: You can bring your assistance animal into a park, as long as it is certified as a trained assistance animal or is an approved assistance animal.

<https://exploreparks.dbca.wa.gov.au/pets-parks>

SHIRE OF BROOME ADDITIONAL UPDATE MAY 2023

Town Beach is not prohibited to dogs, **except** for the actual strip of beach where **ALL** dogs have to be on lead (*you can let them off the lead on the small strip of beach*).

Cable beach is off limits for dogs from the Cable Beach ramp - left through to the Surf Club. After the Surf Club and past the bathing zone through to Gantheaume is the dog exercise area.

The lifeguards have signs out around this area instructing dog walkers left from the Surf Club Stairs.

North of the rocks the dogs have to be kept on lead for a kilometre.

Also at Gantheaume from May through to August between 8am-10am all dogs must be on lead for a good couple of kilometres down the beach during the race season. There's a sign at the top of the ramp which gives the distance.

HEALTH & WELL-BEING

RSPCA Broome

- <https://www.rspcawa.org.au/news/broom-e-to-get-its-first-ever-rspca-inspector>

Baiting

Holiday makers who take their dogs when travelling around regional Western Australia are being reminded to keep them safe from 1080 baits. 1080 baits are used extensively by farmers and pastoralists throughout the State on both private and government lands to control feral pests, including wild dogs, foxes, pigs and rabbits.

- <https://www.wa.gov.au/government/announcements/keeping-family-pets-safe-when-travelling>

CAR TRAVEL

- **Never** leave your dog unattended in a car.
- Even on mild days, **it's dangerous for animals to be left in a car**. Most people understand that if dogs are left in cars during hot weather, they are subject to dangerous conditions, but **there really is NO safe situation to leave your dog unattended in a vehicle**.
- While it may not feel hot to you, **weather conditions can change quickly**, and with them, your dog's chances of survival. Even if the weather stays mild, cars are made of metal and glass which absorb heat, so they can heat up quickly at any time of the year. Temperatures inside a car can climb to more than double the outside temperature in a matter of minutes.
- Broome is hot all year round; **dogs should only be exercised in the early morning or evenings**. Be mindful that **paths and dry sand can be extremely hot and cause burns on their paws**. Most humans wear shoes when walking, dogs don't have that luxury.

BUS TRAVEL

Broome Explorer Bus allows **ONLY guide dogs** to travel on the local bus services.

BROOME VISITOR CENTRE

Pet safety and cane toads

Cane toads secrete a deadly toxin which can poison dogs

Department of Biodiversity, Conservation and Attractions | PARKS AND WILDLIFE SERVICE

If your dog swallows some of this poison, carry out first aid immediately

Department of Biodiversity, Conservation and Attractions | PARKS AND WILDLIFE SERVICE

Keep your dog away from cane toads

- keep dogs inside at night as cane toads are nocturnal
- train your dog not to eat or play with cane toads
- remove toads from your yard, and keep them out by maintaining fences, removing food and water sources and turning off outside lights.

For more information: Cane toads - Parks and Wildlife Service dbca.wa.gov.au

Department of Biodiversity, Conservation and Attractions | PARKS AND WILDLIFE SERVICE

First aid for dogs:

- wipe inside animal's mouth with a damp cloth for 10-15 minutes
- remove slimy coating from the roof of the mouth, tongue, gums and teeth
- keep rinsing the cloth with clean water.

Department of Biodiversity, Conservation and Attractions | PARKS AND WILDLIFE SERVICE

PARVOVIRUS (PARVO)

How can my puppy get Parvo?

Unvaccinated older dogs poo millions of virus particles in each bowel movement

Virus particles are very stable in the soil - they can resist heat and cold

Unvaccinated puppy's walk on the contaminated soil, lick their feet afterwards, and ingest the virus

What symptoms to look out for:

- Lack of energy
- Diarrhoea - often bloody, foul smelling
- Vomiting - watery, foamy, milky or slimy
- Listless attitude

If you notice any of these signs seek veterinary assistance immediately

SAVING ANIMALS FROM EUTHANASIA INC.

Parvo, short for canine parvovirus, is a highly contagious and deadly disease that primarily affects puppies. It causes severe gastrointestinal distress, leading to dehydration, vomiting, and devastating diarrhoea.

Vaccinate Your Puppy From 6 Weeks of Age to Prevent Parvo!

Did you know:

- Your dog doesn't even have to leave the yard to contract the deadly virus
- It doesn't take much for the virus to spread. It can be carried into your backyard by stray dogs, on your shoes, or even by flies
- Once present, the virus can survive in the environment for years
- Affected dogs often develop severe vomiting and diarrhoea which may lead to a slow and painful death
- Puppies are especially at risk

EHRlichiosis

E. canis

AWARENESS

A bacterial disease spread by the Common Brown Dog Tick.

It is present in the Kimberley.

Some signs of the disease include fever, lethargy, swollen lymph nodes, off their food, weight loss, unusual bleeding or bruising and pale gums.

PREVENTION

To protect your dog against Ehrlichia, we recommend dual protection with an oral tick prevention (NexGuard, Bracceto, Simparica) and a tick collar (Seresto).

This is in conjunction with regular tick checks.

There is NO vaccination against *E. canis*.

Tick Prevention is the KEY

TREATMENT

If your dog is diagnosed with Ehrlichiosis - it is likely your vet will prescribe a 4 week course of antibiotics.

In most cases this will treat the disease.

Early diagnosis and treatment is **ESSENTIAL** and provides the best chance of recovery.

Spread awareness, not the disease!
